

BRAINSTORMING

Strategic Product Placement Analysis

Brainstorming Goal

The goal of brainstorming is to identify practical ideas for analyzing retail product placement and converting sales data into clear visual insights. The ideas focus on product performance, store position, customer behavior, pricing, promotions, seasonal trends, and foot traffic.

SALES ANALYSIS IDEAS

- Compare average sales volume across product categories.
- Identify categories with stronger and weaker sales performance.
- Use simple visual comparisons to highlight sales differences.

PRODUCT PLACEMENT IDEAS

- Compare aisle, end-cap, and front-of-store positions.
- Study how product position relates to average sales volume.
- Highlight placement patterns that may improve product visibility.

CUSTOMER INSIGHT IDEAS

- Analyze sales across different consumer demographic groups.
- Compare customer segments using clear visual categories.
- Identify customer groups linked with stronger product performance.

TRAFFIC AND PRICING IDEAS

- Study the relationship between foot traffic and sales volume.
- Compare product price with competitor price.
- Use visual patterns to identify pricing and traffic differences.

PROMOTION AND SEASON IDEAS

- Compare sales during promotional and non-promotional periods.
- Analyze seasonal changes in product sales.
- Identify periods where placement and promotion strategies perform better.

VISUALIZATION IDEAS

- Create an interactive Tableau dashboard with filters.
- Use a Tableau story to present important findings in sequence.
- Embed the dashboard and story in a Flask and Bootstrap web interface.

IDEA SELECTION

From Brainstorming to Final Project Direction

Interactive sales and category analysis	Makes product performance easier to compare.	Create category-wise sales visualizations.
Product position analysis	Supports evaluation of placement effectiveness.	Compare sales across store positions.
Consumer and foot traffic analysis	Connects customer and traffic factors with sales.	Use demographic and foot traffic visualizations.
Pricing, promotion, and seasonal analysis	Adds business context to product performance.	Compare price, competitor price, promotion, and season.
Dashboard and story integration	Presents insights clearly and interactively.	Build Tableau views and embed them in a Flask website.

Selected Solution Idea

Develop an Interactive Strategic Product Placement Analysis solution using Tableau.

The solution analyzes sales volume, product categories, product positions, consumer demographics, foot traffic, product and competitor pricing, promotions, and seasonal trends. The dashboard provides interactive analysis, while the Tableau story presents key findings in a structured sequence. Both visualizations are integrated into a Flask and Bootstrap web application for clear and accessible presentation.

Brainstorming Outcome

The brainstorming process resulted in a focused solution that combines retail analysis, interactive visualization, and web integration. The selected ideas directly support the project objective of identifying useful product placement and sales patterns and presenting them through a clear dashboard and analytical story.
