

EMPATHY MAP

Strategic Product Placement Analysis

Purpose

The empathy map identifies the needs, thoughts, actions, and challenges of retail professionals who analyze product placement and sales performance. It helps define how interactive visual analysis can support faster and clearer retail decisions.

SAYS

- I need to identify which product positions perform better.
- Sales information should be simple to compare and understand.
- Visual insights can help explain retail performance clearly.

THINKS

- Which product category has stronger average sales?
- How do product position and foot traffic affect performance?
- Do promotions, seasons, and customer groups influence sales?

DOES

- Compares sales volume across product categories.
- Reviews product position, pricing, and competitor price.
- Uses filters to study demographics, promotions, and foot traffic.

FEELS

- Confused when data is scattered across different reports.
- Interested when important sales patterns become visible.
- Confident when decisions are supported by clear visual evidence.

PAINS

- Raw retail data takes time to interpret.
- Static reports make detailed comparisons difficult.
- Multiple sales factors must be analyzed before choosing a placement strategy.

GAINS

- A clear and interactive view of retail performance.
- Faster identification of useful product placement patterns.
- Better support for data-driven retail decisions and recommendations.

EMPATHY INSIGHTS

Understanding the Core User Need

Retail sales performance is influenced by product category, position, demographics, price, promotion, season, and foot traffic.	A simple method to compare connected retail factors and identify meaningful patterns.	Interactive visualizations that combine important sales and placement measures.
Raw and static reports can make comparison slow and difficult.	Clear insights that can be understood and communicated quickly.	A dashboard and story that present retail findings in a structured visual format.

Key Empathy Statement

Retail professionals need a clear and interactive way to connect product placement with sales-related factors because scattered and static information makes comparison difficult and slows decision-making.

Outcome

The empathy study highlights the need to transform complex retail data into clear visual insights. Strategic Product Placement Analysis addresses this need by using interactive Tableau dashboards and stories to compare sales volume, product placement, customer demographics, pricing, promotions, seasonal trends, and foot traffic. This supports quicker analysis and more informed retail decisions.
