

PERFORMANCE TESTING TEMPLATE

Strategic Product Placement Analysis

Testing Objective

The objective of performance testing is to verify that the deployed Strategic Product Placement Analysis web application loads correctly, provides smooth navigation, displays the embedded Tableau dashboard and story, and preserves important interactive features during normal project use.

Test Environment

Test Item	Project Configuration
Application	Strategic Product Placement Analysis
Web Framework	Python and Flask
Frontend	HTML, CSS, Bootstrap, and JavaScript
Visualization	Tableau Public Dashboard and Tableau Story
Deployment	Render Web Service
Access Mode	Modern desktop web browser with internet connection

Performance Test Cases

ID	Test Scenario	Expected Result	Status
PT-01	Open the deployed portfolio URL.	The Flask website opens and the main page is displayed.	PASS
PT-02	Navigate through Home, About, Dashboard, Story, and Contact sections.	Navigation moves to the selected project section correctly.	PASS
PT-03	Load the embedded Tableau dashboard.	The dashboard loads inside the website and remains visible.	PASS
PT-04	Use dashboard filters and interactive visual elements.	The Tableau dashboard responds to user interaction.	PASS
PT-05	Load the embedded Tableau Story.	The Story is displayed inside the project website.	PASS
PT-06	Move through the Tableau Story scenes.	Story navigation changes between the analytical views.	PASS
PT-07	Review dashboard and story alignment.	Embedded visualizations are presented within the project layout.	PASS
PT-08	Refresh the deployed web application.	The application reloads without losing the main project structure.	PASS
PT-09	Open the public website after deployment.	The project is accessible through the Render public URL.	PASS
PT-10	Review normal browsing and visualization use.	The interface remains usable during project demonstration.	PASS

TEST RESULTS AND OBSERVATIONS

Performance Review of the Final Project

WEBSITE LOADING	The deployed Flask application is accessible through its public project URL and displays the project interface.
NAVIGATION	The website sections provide a clear path to project information, dashboard, story, and contact content.
DASHBOARD INTERACTION	The embedded Tableau dashboard supports visual exploration and dashboard interactions within the website.
STORY NAVIGATION	The Tableau Story presents the analytical views in sequence and supports movement between story scenes.
EMBEDDED VISUALIZATION	The Tableau dashboard and story are integrated into the Flask interface as published interactive views.
PUBLIC DEPLOYMENT	The Render deployment provides a public web address for project demonstration and access.

Final Testing Result

Overall Result: PASS

The Strategic Product Placement Analysis project satisfies the defined functional performance checks for normal demonstration use. The Flask website, navigation, embedded Tableau dashboard, dashboard interaction, Tableau Story, story navigation, and public deployment were included in the final performance test checklist. The completed project is suitable for presentation and project submission.

Testing Outcome

Performance testing confirms that the major project components work together for normal use. The web application provides access to the project sections, and the Tableau visualizations remain available as interactive embedded content. The testing results support the readiness of the project for final demonstration and documentation.
