

CUSTOMER JOURNEY MAP

Strategic Product Placement Analysis

Purpose

The customer journey map describes how a retail user moves from identifying a sales analysis need to exploring interactive visualizations and using the resulting insights for product placement decisions. It highlights the user's actions, needs, challenges, and opportunities at each stage.

Journey Stage	1. Identify Need	2. Explore Data	3. Analyze	4. Discover Insights	5. Decide
User Action	Recognizes the need to review product placement and sales performance.	Opens the analysis and reviews available retail measures.	Uses dashboard filters and compares visualizations.	Studies patterns across category, position, traffic, price, and demographics.	Uses findings to support product placement recommendations.
User Need	A clear understanding of the business problem.	Easy access to relevant sales and placement information.	Simple comparisons and interactive exploration.	Clear relationships between retail factors and sales.	Reliable visual evidence for decision-making.
Pain Point	The problem may involve many connected sales factors.	Raw data can be difficult to understand quickly.	Static reports slow comparison and exploration.	Important patterns may be missed in disconnected views.	Decisions are difficult without clear supporting insights.
Solution Support	Define focused business questions.	Present important measures through structured visualizations.	Provide Tableau filters and interactive charts.	Use dashboard and story views to highlight key findings.	Present clear analytical insights for retail planning.
Experience	Focused	Curious	Engaged	Informed	Confident

JOURNEY INSIGHTS

Key Requirements Identified from the User Journey

STAGE	KEY REQUIREMENT	PROJECT RESPONSE
Identify Need	The analysis must begin with clear retail business questions.	Focus on sales volume, product category, placement, demographics, foot traffic, price, promotion, and season.
Explore Data	Retail information must be easy to access and understand.	Use structured Tableau visualizations instead of relying only on raw data.
Analyze	Users need interactive comparisons.	Provide filters and charts for exploring multiple retail factors.
Discover Insights	Patterns must be presented clearly.	Use a Tableau dashboard and story to organize visual findings.
Decide	Insights should support practical retail decisions.	Present product placement and sales patterns in a clear web interface.

Journey Outcome

The customer journey shows that users need a smooth path from business problem identification to insight-based decision-making. Strategic Product Placement Analysis supports this journey through interactive Tableau visualizations, a guided analytical story, and a Flask and Bootstrap web interface. The solution reduces the difficulty of interpreting complex retail data and helps users understand important product placement and sales patterns.
